As the nanoparticles has been an major role in crystals and technology. It was an another source of the particle so that it has been made to do some particles of carbon an major source can be used as an antibacterial activity.

Beside the role the nanoparticle of carbon has a major role in water and current purification an energy natural fuel has been used for machines and transport sources such as coal and carbon manufacturing source it plays a role.

carbon an c12 source has been used in radioactive source our lives are filled with carbon. carbon can be used an attractive fuel and a eco friendly fertilizer for future sources.

Keywords: nanoparticles of carbon
